Scope and content of the procurement in the project Lielähti-Rauma/Pori

- Digirail program is planning a procurement which consists of the Control Command and Signalling System and devices in area Lielähti-Rauma/Pori in Finland and maintenance, support services and continuous development of the system. The exact scope of ETCS based Control Command and Signalling system will be negotiated during the procurement process.
- The Service Provider's tasks include all of the services that are required to supply a working Advanced ERTMS level-R based Control Command and Signalling system. The Service Provider's tasks also include system maintenance services, support services, lifecycle management and further development of the system.
